

Molded Fiber Glass, a leading wind turbine manufacturing firm in Aberdeen, SD is looking to immediately fill the following positions:

Health, Environmental & Safety Manager

The HSE Manager will be responsible for managing all programs, policies, and procedures which ensure compliance with Environmental and Safety requirements. This individual will develop and/or coordinate safety programs and training activities which promote overall safety and health. Candidates should possess a bachelor's degree in Safety & Environmental Science or equivalent, and must possess 3-5 years background in leading an industrial Safety & Health program.

Quality Engineer

The QE will direct activities concerned with development, application, and maintenance of quality standards for industrial processes, materials, and products. This individual will also lead the implementation of ISO certification. Candidates must possess a BS degree in Engineering or an Associate Engineering degree with at least 3 years experience in a manufacturing environment. Also, must possess experience in ISO certification auditing and implementation. Experience in composites and/or wind energy a plus.

Quality Manager

The QM will develop, implement, and monitor programs and procedures pertaining to all divisional quality issues and requirements, and will also manage and maintain ISO implementation. Qualifications include a minimum associate's degree in Engineering or related area and at least 8 years experience in areas of product/material testing, inspection quality assurance and SPC. Training and background in implementing ISO/QS 9000 system required.

Tooling Project Leader/Blade Process Engineer

This position will be responsible for the rollout of a new tooling program by maintaining the tooling project schedules and coordinating work between the entities and suppliers, from tool build through qualification. Once project successfully completed, this person will then join the blade development team, and will be responsible for projects supporting current blade development/process implementation and new blade development. Candidates should possess a Tooling/Tooling Engineering background. Experience in composites and project management preferred.
